Thermo Scientific™ Proteome Discoverer™ Software virtual training workshops

Dear Orbitrap users,

We are pleased to invite you to our Autumn 2023 version of virtual activities to support our Proteome Discoverer (PD) software users.

The workshops are designed to bring beginners up-to-speed with best practices as well as allow advanced users to interact with software experts and enquire how to get the most out of their data. Additionally, a dedicated session specialized in Tandem Mass Tagging (TMT) data processing will follow.

The content is delivered through online workshops, 2-3 hours each, via MS-Teams. The workshops feature live exercises on pre-distributed data, discussion of PD features, parameters, and optimized settings. The sessions are **hands-on** and **highly interactive**, so get the best experience by having PD 2.4, 2.5, 3.0 with CHIMERYS™, or 3.1 with CHIMERYS up and running. Click HERE to download a free 60-day trial version of the latest Proteome Discoverer software release and CHIMERYS algorithm.

The sessions allow ample time for the participants to get their PD-related questions answered in real time. We will also review the new features in **PD 3.1**. The workshops will be taught in English, but participants can use MS Team`s instant subtitles in their preferred language.

General Proteome Discoverer software training:

Tuesday	5th September	13.30-17.00 CEST (Berlin time)
Wednesday	6th September	13.30-17.00 CEST (Berlin time)
Thursday	7th September	13.30-17.00 CEST (Berlin time)

Specialized TMT data processing:

Wednesday	27th September	15.00-17.00 CEST (Berlin time)
Thursday	28th September	15.00-17.00 CEST (Berlin time)
